

Introduction

Holy Cross Petition and Petition sent from Alice Harte Elementary School. The Corps has developed a plan for the replacement of the Inner Harbor navigation Canal Lock (Industrial Canal Lock) that minimizes the impact to the surrounding communities to the maximum extent practicable. The proposed plan will not require any residential relocations by utilizing innovative construction techniques that will occur within the confines of the existing canal. We have also recently developed plans for a temporary bridge at St. Claude Avenue that will keep that bridge open to vehicular traffic at all times. Additional studies have shown that the closure of the Claiborne Avenue bridge can be reduced to about two weeks.

The impacts to the Holy Cross neighborhood have been significantly reduced because of these changes. However, there will still be impacts. Recognizing this, a \$33 million community impact mitigation plan has been developed, which has already been authorized for implementation by Congress, that attempts to minimize or compensate for the direct and indirect impacts the project will have on their neighborhood.

Petition from St. Bernard Town Hall Meeting. The lock is considered a separable element under the MR-GO authority. This report does not address the MR-GO channel and related problems.

While we agree that a new vehicular bridge, mid-rise or high-rise, is needed at Florida Avenue for better traffic flow and improved hurricane evacuation over the Industrial Canal, we do not have authority under the lock replacement project to include any work at that location. The State of Louisiana has been planning for a new bridge at that location for a number of years. We have assumed that a new bridge there is in our without project condition.

P.O. Box 60267
New Orleans, LA 70160

Dear Colonel Conner:

We the residents of the Lower Ninth Ward and others hereby declare our opposition to the Industrial Canal Expansion project of the U.S. Army Corps of Engineers. We believe this project is a direct threat to safety, environment, residential property values, historical continuity, business viability, family and social fabric, transportation that can not be compensated. In addition, nor do we want to accommodate larger ship traffic.

We are attaching a signed petition that expresses our sentiments toward this upheaval which is not based on unfounded fears but on outrage rooted in awareness.

In effect, such a project will destroy this area, therefore, we strongly withstand the construction of this project in our neighborhood.

This project is not acceptable!

Sincerely,

John Koeferl

WIDENING OF THE INDUSTRIAL CANAL

We the residents of the Lower Ninth Ward and others hereby declare our opposition to the Industrial Canal expansion project of the U.S. Corps of Engineer. We believe this project is a direct threat to safety, environment, residential property values, historical continuity, business liability, family and social fabric, as well as, transportation that can not be compensated.

We will not accept this project. We believe the process the Engineers used is unfair.
